

# Stellar Evolution

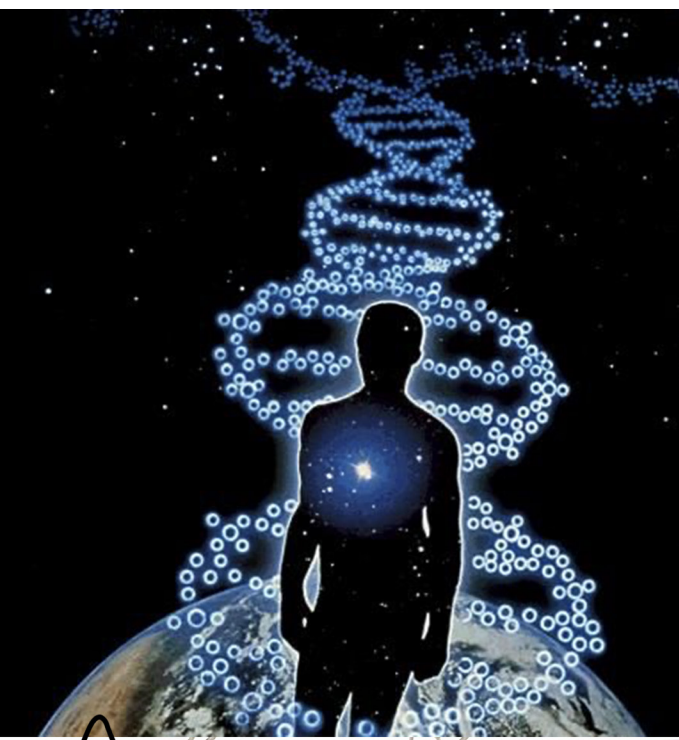

# Concept Note

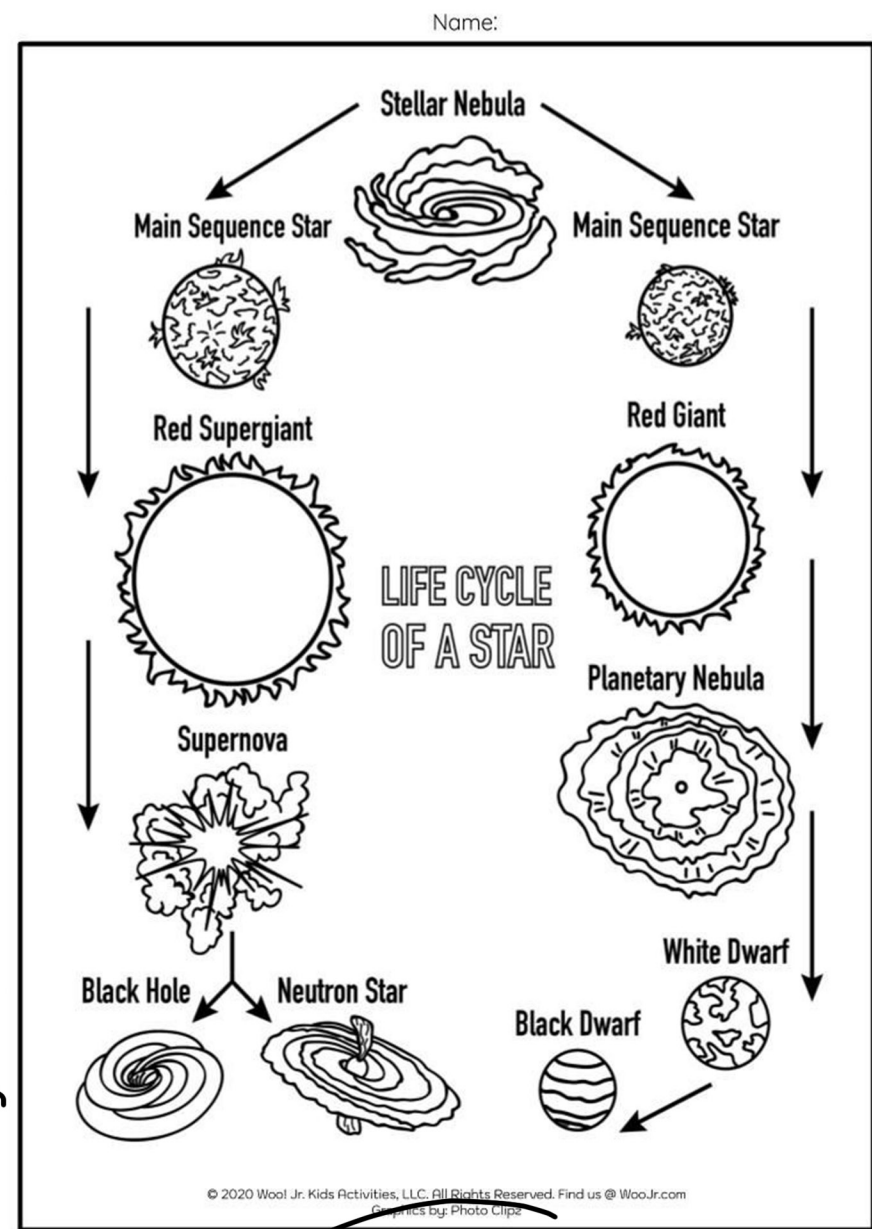

This collection is based on the life cycle of a star “Stellar Evolution.” Using the phases of its destruction and the formation of a nebula I portray a cycle of human emotions through a human to star comparison. It starts with a supernova which represents a collision within one’s self. The acceptance of change and letting things go is portrayed through a neutron stellar. Finally, the rise of a nebula shows evolution - the new, better version of yourself. The entire collection revolves around human growth shown through the contrast of astronomical demolition.
